

INVALIDATING DEVICE FOR PERFORATING PLANE OBJECTS**Abstract of the Invention**

The device for invalidating plane objects, in particular defective products in the securities sector, such as banknotes, notes of value, etc., by perforating means, has a horizontal base plate (9) onto which the objects (14) to be invalidated are placed, and die plates (13, 17, 18) which are vertically
5 movable and parallel to said base plate, as well as a drive mechanism by which the die plates can be displaced up and down. The perforating means comprise at least one cutting bushing (23) with a hollow paper drill (19) interacting with the cutting bushing in order to displace the paper scrap in the paper drill.
